

Today's Education for the Careers of Tomorrow

Preparing our students for their futures is no easy task. We teach, test, and train them for every possible outcome that we can think of. However, what if the actual pathway to their success results in a career that has not yet even been created? What if they will be using tools that are not even currently available at companies that have not yet been born? The future is sitting in front of you today and they are excited about what tomorrow has to offer. Are you?

This is a **FREE** 35-45 minute high energy presentation presented by team members from the Innovative Curriculum Resources Project. Time can be adjusted to fit any time frame. Great for the entire education community, including teachers, administrators, board members and your community members. [Click here](#) to view slide deck of presentation.

Contact Rod McQuality at rdmcqua@ilstu.edu or any other team member to schedule a presentation.
